

### Description

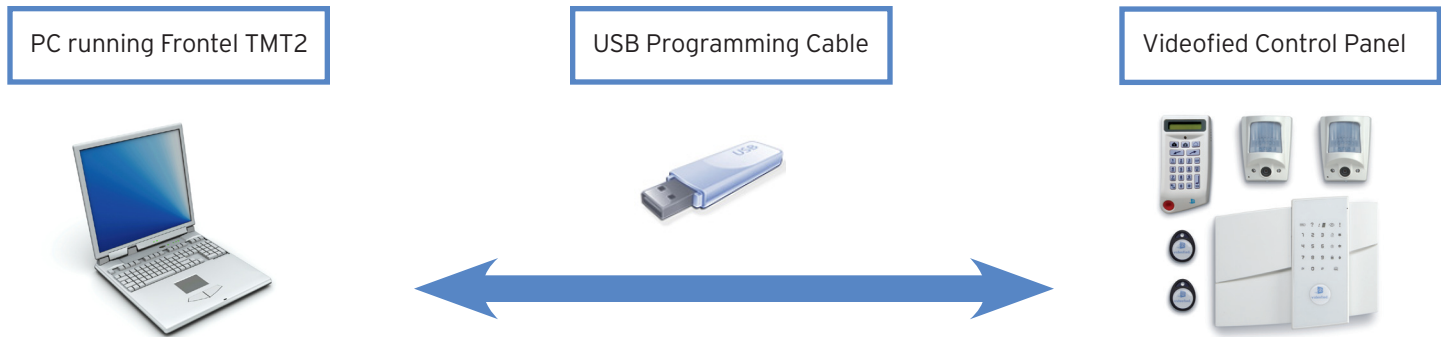

The **USB Programming cable model XCABL-USB** allows you to connect any PC to the new range of Videofied control panels (XL, XT, XV, etc...).

It consists of a USB dongle that connects into any standard USB plug and a cable that connects into your control panel.

The USB Programming cable does not need any power supply and is powered by the USB plug of your PC.

### Features

- > The USB Programming cable is designed to be used in combination with FRONTEL TMT2 the programming software from RSI Video Technologies.
- > FRONTEL TMT2 is available from your nearest Videofied representative or from [www.videofied.com](http://www.videofied.com) and requires any version of Windows above XP.

### TMT 2

TMT2 is an easy-to-use programming software with built-in help. TMT2 gives you full control over all the settings of a Videofied Control Panel.
